

Restaurant POS Management System

Abstract

The Restaurant Point of Sale (POS) Management System is a comprehensive software solution designed to streamline restaurant operations, with a primary focus on the billing process. It consists of an Admin Page and a Staff Page, each offering specific functionalities to enhance efficiency.

Admin Page:

- Category Management:
 - Creation, deletion, and updating of categories for effective organization of menu items.
- Product Management:
 - Insertion, deletion, and updating of products
- Sales Reporting:
 - Generation of detailed report.

Staff Page:

- Order Taking:
 - Seamless order-taking process for staff members to provide a smooth customer experience.

Billing:

- processing of orders and generation of accurate bills.

The Restaurant POS Management System enhances the efficiency of category and product management, order taking, billing, and sales reporting. It enables informed decision-making, enhances customer service, and contributes to the success of the restaurant.
